

## **Ignite Showcase, Part 3**

Friday morning 11:30 a.m. - 12:00 p.m.

These 5-minute presentations give a lightning-quick overview of a project, technology, or network update.

### **Property Dashboard**

**Bob Gradeck and Steve Saylor**, University of Pittsburgh

The Western Pennsylvania Regional Data Center's Property Dashboard integrates data from multiple data sources and provides it all in one place. The tool allows you to view property data in one place as easy as clicking on a map. It is built on top of our property data API which integrates data from multiple data sources. We plan to add new features to the tool, and received great feedback from people at our user group meeting in March.

### **Toxic Risk: Using PUMS Data to Estimate Risk for Toxic Stress**

**Anthony Galvan**, University of Texas at Dallas

In this session, the authors present their methodology and findings from using Census Public Use Micro Sample data to estimate the number of children at risk for toxic stress in Texas.

### **Community Voices in Data Design**

**Carrie Koss Vallejo**, Data You Can Use

Having community organizers and residents involved in the planning process for data portraits was key for producing useful reports on CDBG neighborhoods in Milwaukee. The data has been used as a template to create two further sets of reports since September 2016.

### **Staff Onboarding, Partner Participation and Updates from HQ**

**Rob Pitingolo**, Urban Institute

Last spring Rob introduced the NNIP Participation Scorecard to the network. Partnership in NNIP comes with the expectation that organizations act as good stewards of the network. Participation takes many forms, including attending the partnership meetings, presenting at an online showcase, updating the NNIP website, and displaying the logo on their own website. To make it easier for partners to allow their staff to participate in the network, we've created a new staff onboarding guide that Rob will introduce. The guide provides instructions for how to orient new staff to NNIP and what to do when staff turns over.
